Continuation of 5, does NOT place the application in condition for allowance because: the claims still read on the prior art of record.

In penultimate para. at page 5 of response after final rejection, Applicants wonder whether Tanaka discloses error correction insertion as formulated in the 1st office action. Examiner maintains that such insertion means is disclosed in Tanaka. Data partitioning into subsets is taught in more detail in Seshadri, hence the reason behind combining the two references.

In para 2 at page 6, Applicants concede that Tanaka discloses that packet length changes according to information content of each media information or equivalently, packet length changes in proportion of, or according to, information content of each media information, or packet length is a function of information content of each media information. In other words, data fields vary in proportion with the amount of media information to be transferred.

Applicants arguments, re: Tanaka's length variations based on current conditions or backlog, require further consideration. As indicated in the final rejection, para 98 of Tanaka describes multimedia data packet comprising A1 voice bits, A2 data bits and A3 image bits: A1=A2=A3 implies equal proportion, else there is unequal proportion. At any rate, the packet length is still a function of, or proportional to, the size of each of the plural media streams.

In response to applicant's argument, at page 7, that the examiner's conclusion of obviousness is based upon improper/impermissible hindsight reasoning, Examiner notes that it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See In re McLaughlin, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Examiner thus maintains that the claims still read on the prior art of record.
